

Gallium Semiconductor's Policy on EU RoHS

November 2021

Gallium Semiconductor is committed to compliance with the EU RoHS Directive 2011/65/EU and the Directive (EU) 2015/863 Amendment, on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

The EU RoHS Directive stipulates that EEE must not contain above 0.1% (except for cadmium which is limited to 0.01%) by weight of homogeneous material of the restricted substances, unless that use is covered by a listed exemption where a restricted substance can be used above the threshold in certain applications. Moreover, electronic equipment for use in military and space applications is excluded from the scope of the legislation.

We review our suppliers' certifications, material content data and confidentially disclosed chemicals and materials information on an on-going basis, to compliant with the RoHS Directive.

Although our most products sold into the commercial market are below the maximum concentration limits, certain products require the use of an exemption to meet compliance. We continue to monitor progress on the possible extension of these exemptions, while working on eliminating the necessity for their use.
